Position Description

NMR is currently seeking candidates for a Quantitative Analyst position.

We are a small but expanding consulting firm specializing in the evaluation of energy efficiency and renewable energy programs. Efficiency and renewables are burgeoning fields providing excellent career opportunities for social scientists in a field that makes a difference.

NMR currently seeks to hire an individual possessing the knowledge, skills, and abilities typically gained through doctoral level graduate education or prior work in economics, statistics, or other mathematical fields or possibly a master's degree plus relevant work experience. These qualifications include, but are not limited to, the following:

- * Proficiency with very large datasets (e.g., thousands of cases and variables)
- * Working knowledge of Bayesian statistics
- * Considerable experience developing quantitative models while minimizing bias and maximizing

efficiency and consistency estimators

- * Ability to perform descriptive quantitative analyses using Stata, SPSS or similar data analysis packages

- * Facility with writing clear and concise research summaries, memoranda, and reports

We prefer candidates with experience addressing energy-related concerns, and also candidates who understand the principles and practices of program impact evaluation. However, NMR will consider candidates with relevant skills and expertise gained in other fields. Experience with complex sample designs and weighting, along with survey design, implementation, and analysis experience are also valuable but not essential.

Successful employees should have strong expectations of advancement in this growing company and field.

NMR is committed to the environment and to minimal greenhouse gas emissions. Our carbon footprint is much smaller than similarly sized office-based business in the Northeast. We offer competitive benefits including health, dental, disability, 401K, T passes for those who plan to commute via public transportation and three weeks paid vacation (and up to five weeks after multiple years of employment).

Please submit a resume and cover letter to openings@nmrgroupinc.com.
