16th Conference International Section

October 9–10, 2020, Athens, Greece

Sustainable Agriculture, Food Security and Climate Change: Challenges and Opportunities in Bio-economy

www.etagro.gr/2020

The Aim of the Conference

The Hellenic Association of Agricultural Economics (ETAGRO) is pleased to invite contributors across the globe to attend the *International Section in Agricultural Economics* which is going to be part of the *16th Conference of the Hellenic Agricultural Economics Association*, held in the historic and lively city of Athens during October 2020. The main theme of the *International Section* of the Conference is *Sustainable Agriculture, Food Security, and Climate Change: Challenges and Opportunities in Bio-economy*.

Modern agriculture is both causing and being affected by radical transformations in agri-food systems as well as acute climate change-related risks. Various health issues caused by globalized diets, as well as the persisting problems of hunger and malnutrition, bring food and nutrition security to the forefront of scientific and political discourse. On the other hand, extreme and unpredictable adverse climatic events already affect agriculture, exacerbating the long-standing problems of resource depletion and environmental degradation. Therefore, profound economic, social, and environmental impacts are expected, thus rendering the quest for sustainability even more complicated and demanding.

In this context, Bio-economy can make a decisive contribution in tackling often contradicting issues such as climate change or terrestrial and aquatic ecosystem degradation on one hand, and the growing demand for increased production of agricultural products and foodstuffs on the other.

Bio-economy is a vast and important sector in the European Union and includes agriculture, silviculture, fishery, foodstuffs, bioenergy, and bio-based products. It has an annual turnover of about two trillion euros and employs nearly 18 million. Moreover, it is a key factor for boosting the development in rural and coastal areas, and it can create 1 million new green jobs by 2030.

The International Section in Agricultural Economics of the 16th Conference of the Hellenic Agricultural Economics Association expects leaders, policymakers, academics, scientists, producers, and political bodies to attend and share their work experiences and thoughts in various subjects related to the bio-economy such as sustainable agri-food systems, sustainable food security, climate change mitigation, and new technologies, and others.

Target Audience

All interested scholars or representatives among governmental entities, institutions, industries, NGOs, etc. are invited to contribute with up-to-date approaches on the meeting.

The specific objective of this meeting is to become the bridge in terms of communication and collaboration between science and research as well as the bodies and the stakeholders in agriculture, thereby facilitating the transfer of research data and expertise.

The participation in the conference of young scholars and students with the presentation of relevant research papers is considered significant and strongly recommended and encouraged. A series of parallel sessions will be organized in the International Section of the conference and a well-recognized international scholar will address the participants on a topic related to the theme of the International Section of the Conference.
