## **The Role of U.S. Agriculture in Chinese Markets: Factors affecting Chinese food and agricultural trade**

- Moderator – **Dr. Joseph Glauber**, Senior Research Fellow, International Food Policy Research Institute
- Guest speaker – **Dr. Holly Wang**, Professor at the Department of Agricultural Economics, Purdue University.

China is the largest food and agricultural export market for the United States, receiving about \$30 billion, or 20% of total agricultural export value, in 2014 (including Hong Kong). The Chinese importing market is broad, extending from bio- and ag-inputs such as seeds, farm chemicals, animal genes, and veterinary supplies, all the way to ready-to-eat or drink products in the retail or food service sectors. The major imports are commodities such as soybeans, distiller's dried grains with solubles, hides and skins, tree nuts, coarse grains, cotton and beef. As the Chinese population, income, and urbanization continue to grow against its natural resource constraints, the demand in agricultural products from the global market is also expected to increase. However, this market is rather complicated and includes non-tariff trade barriers, strong domestic production support, consumer food safety fears, and the public concerns about biotechnology. Amid these complexities, speakers will address the Chinese food market with an emphasis from the U.S. trade perspective. Information, knowledge, and outlook for stakeholders to envision the roles each can play in the world market will be discussed.

## **Choices: Increasing Nutrition among Low Income and Food Insecure Individuals**

- Guest Speaker – **Dr. David R. Just**, Professor Charles H. Dyson School of Applied Economics and Management and Director of the Cornell Center for Behavioral Economics in Child Nutrition Programs

Stronger measures are being suggested, and in some cases taken, in an effort to curb the costs of childhood and adult obesity. Economic research has shown that these measures can sometimes have counterintuitive impacts on populations that are food insecure. Recent evidence suggests that low-income populations are subject to greater stress and distraction, potentially leading to poor nutritional

decisions. However, cognitive stress can also cause individuals to be more receptive to indirect suggestions about nutritionally beneficial food choices. Research from food insecure populations served at food pantries shows evidence of healthy eating behaviors in the presence of interventions including positive reinforcement of nutritional food choices. These results show promise for implementation of the framework behind the '[Smarter Lunchrooms](#)' research in a variety of food decision contexts. See: [Smarter Lunchrooms: Using Behavioral Economics to Improve Meal Selection](#).
