

Extension Section Crops Outlook

Organizers: Kim Anderson, Oklahoma State University

Program Description: This organized symposium will focus on the grain, oilseed and cotton inputs situation and outlook. The Extension Outlook symposia have been an integral part of the AAEA meetings for more than two decades. Presenters will explore the current trends in grain and oilseed production, demand factors, price outlook, and an overview of changes in land use and prices due to ethanol production. Session Rationale (for review purposes only) : This track section is part of an overall outlook program that is presented by the Extension Section to AAEA members. The outlook will focus on major feed grains, wheat, the soybean complex, and other related grains. Presenters will explore the current trends in grain and oilseed production, demand factors, price outlook, and an overview of changes in land use and prices due to ethanol production.
